OPENNESS

The openness percentage refers to the amount of sunlight that filters through your shades based on how tightly the fabric is woven. Higher percentages allow more light to filter through, while lower percentages allowless light through.

VALANCE

Window valances create a sleek border covering the roller tube and hardware to provide a flush look. Not only do they enhance your window aesthetically, they also help insulate your window. Fabric cassettes are valances with fabric matching your shade over top to create a seamless window appearance.

Chain - Manual Operation

Roller shades come standard with manual operation using chains. Choose between plastic (black or white) or metal (silver).

BLACK WHITE SILVER

Corded blinds or shades need to be locked in so that children and pets are unable to mess with them. Dangling cords or strings can become a threat or hazard. To secure the cord, it needs to be anchored down and locked into the side of the shade. ShadeMonster window treatments always come with a cord anchor to tightly secure chains and cords.

Motorization

Corded blinds or shades need to be locked in so that children and pets are unable to mess with them. Dangling cords or strings can become a threat or hazard. To secure the cord, it needs to be anchored down and locked into the side of the shade. ShadeMonster window treatments always come with a cord anchor to tightly secure chains and cords.

Smart Hubs

Control your shades with a remote control, free smartphone app, or upgrade to a smart hub to use Google Assistant or Amazon Alexa to control your shades with voice commands.

Hardwire

A hardwiredplug-in motor is a motor that is directly wired to an electrical source, such as an outlet or light switch. These motors are typically installed by a professional and require a licensed electrician toensure proper installation.

Battery Operated

Battery operated motors are motors that are powered by batteries, typically rechargeable ones. These motors are typically lessexpensive thanhardwired motors and can be easily installed by anyone with basic DIY skills. Battery operated motors are ideal for smaller window treatments, such as blinds or shades, as they can support lighter loads.
