How To Program: Somfy Battery Operated Motor

Please Read and Follow These Instructions.

When your Somfy battery operated motor is in need of recharging, the LED light on the motor will blink red and the motor will not respond to the remote.
Only use the correct Somfy plug-in charger to charge your Somfy motorized shades. Improper use can lead to possible over heating and fire risk.
The charging process is very simple to follow and involves three easy steps. The process takes up to 6 hours. Depending on frequency of use, your Somfy battery operated motorized shades may need to be charged every 6 months.

STEP 1 - Locate charging port on motor head.
Take a moment to locate the charging port on your motor head.

STEP 2 - Plug in charger.
Simply plug in the charger to the motor head charging port. Then plug the charger into the closest outlet. The LED indicator on the charger will illuminate red while charging. When the light changes from red to green, the battery is fully charged and ready to use. This may take up to six hours.

STEP 3 - Disconnect the charger.
Disconnect the charger from the motor head charging port and remove the plug in from the
outlet.

Note: The shade can be used as usual while the battery is charging.
